(a) the brake, by recipe
typical log-stretch λ_k
loop k
(b) the loss past r
$L_k - L_8$ (nats)
loop k
(c) public models
typical log-stretch λ_k
our Poisson
Parcae
Huginn
Ouro 1.4B
Ouro 2.6B
loop $k/\bar{r}$ (training depth $\bar{r}$)
fixed, through every loop
loss at every loop
Poisson, through every loop
Poisson, truncated to 4
