(a) the loss rises and falls
fixed $r = 8$, 1.5B
Poisson (mean 8)
$L_k - L_r$ (nats)
loop k
(b) distance from s_r
fixed $r = 8$, 1.5B
Poisson (from s_8)
$\|s_k - s_r\| / \|s_r\|$
loop k
(c) the step keeps turning
$r = 6$
$r = 8$
$r = 10$
$r = 12$
$r = 16$
$r = 20$
$r = 24$
Poisson
turns of the step $\Theta(j)/2\pi$
loops after r, j/r
